

## **ABSTRACT**

This project is used to describe the ambulance tracking with health monitoring system. With the help of this project we can find out the location of ambulance. At the same time, we can also monitor various health parameter of a patient like temperature, humidity and heart beat rate, blood pressure and Electro cardiogram. These parameters of patient are sending to hospital and also doctors mobile. At the same time the ambulance location and ambulance number is send to the hospital. GPS is used to track the ambulance location and GSM is used to send the message to the hospital. By using these parameters, doctor can do the necessary preparation for treatment of patient.
