

ABSTRACT

Here we have fabricated the three axis pneumatic modern trailer. This project is used to avoid the difficulty for loading/unloading the material in various applications and it have fabricated with a simple and suitable arrangement for easy operation this project is controlled through the pneumatic power and the control buttons in control unit. By pressing the direction control buttons the trailer start to rotate in clockwise and anticlockwise direction. So we can easily obtain the required direction and make the loading or unloading operation due to our need.

1.1 INTRODUCTION	34
1.2 ROTATING TRAILER USING PNEUMATIC SYSTEM	34
1.3 DEVELOPMENT OF TRAILOR	35
1.4 BY USING SINGLE CYLINDER	36
2 DESIGN CALCULATION OF EQUIPMENT	37
2.1 DESIGN OF PISTON ROD	38
2.2 DESIGN OF CYLINDER THICKNESS	38
2.3 DESIGN OF BALL BEARING	41
2.4 SPECIFICATION	42
2.5 SOFTWARE DETAILS	43
2.6 MODELING	44
3 ANALYSIS OF GEAR	44
3.1 GEAR MESH	45
3.2 MAXIMUM PRINCIPLE	46
3.3 ELASTIC STRAINS	47
3.4 MAXIMUM ELASTIC STRESS	48
3.5 TOTAL DEFORMATION	49
