

ABSTRACT

In existing real world there is no Automation System for waste management system, In this implement an online compliant management system with auto compliant has been implement. This website development of a country depends on the city's cleanliness. Our Smart complaint management System is a dynamic memory management process that finds stranded blocks of memory and reallocates them as in Operating System .As part of the smart city concept, we need a system that helps in development of cities in the areas like Primary education, people's healthcare, Roads and Transportation, Drinking water facilities,government policies awareness and availability of basic facilities/infrastructure. This system helps the users to collaborate, plan, assess and implement different activities and learn with others experience/feedbacks and suggestions. The People can easily post the compliant about the problems in our place and also track status of the complaints. After receiving the complaints, the correspondent officers are take action within two days of the complaints.Otherwise the complaints automatically forward to the next level of higher officers by using alert message. And this website have post the complaint automatically when the dustbin is full.
