

ABSTRACT

An online code editor is a web-based application that allows users to write, edit, and execute code in various programming languages. An online code editor provides a browser - based interface that eliminates the need to install software locally on a computer. Here is an abstract proposal for an online code editor: The online code editor will provide a user- friendly and intuitive interface that will allow users to write and edit code in a web browser. The editor will support various programming languages and syntax highlighting to make code editing easier and more efficient. The collaboration features, allow multiple users to work on the same code file simultaneously. Users will be able to share their code files with other users and collaborate in real time using chat and commenting features. Internet programming explains the terms HTML and HTML tags explain the term "HTML," write simple HTML codes using popular tags and use Web browsers to display HTML codes. It also explains the term "XHTML," writing simple HTML5 codes using popular tags and using Web browsers to display HTML codes outlining how to create, modify, process, view and validate XML documents.
