

ABSTRACT

Claiming insurance through online has become a popular choice among policyholders due to its convenience and efficiency. Online insurance claims allow policyholders to submit their claims from the comfort of their own home or office, without the need for physical paperwork or visits to the insurer's office. The process typically involves filling out an online claim form, uploading any relevant documents or proof of loss, and submitting the claim electronically. Insurance companies are able to process online claims quickly, allowing policyholders to receive their payouts in a timely manner. Overall, the ease and speed of the online claims process make it a preferred option for policyholders looking to file a claim. Telemedicine is a valuable addition to our electronic health record sharing website, allowing patients to remotely consult with doctors, receive medical advice, and claim insurance online. Block-chain has been emerging technology for a few years now. The key features of Block-chain which attract most developers are its immutability, decentralization, transparency, distributed ledger. So, the use of Block-chain in Health Care systems will make a drastic impact as it can be used to securely store personal medical data.
