

## ABSTRACT

Agriculture is the back bone of India. In agriculture as like yielding, harvesting is also an important process. Harvesting by manual method is time consuming and using other equipment costs more. Thus, by using Low-cost mini paddy cutter machine we can reduce the cost and timing. It also increases the efficiency. This machine is used to cut the low-level crops which is less than five feet height. The machine can be easily constructable and it can be easily serviceable. Strong blades have been used in this device for the cutting process by using that we can cut dense paddies. It also reduces the labour cost.
