

ABSTRACT

The invention of SI engines and their increased use in automobile industries, pollution has become a cause for major concern since the last two decades. Since 2018 the government interduce In BS VI engine has catalytic convertor for reduce toxic pollutions and good performance but in BS IV there has no retrofit devices for controlling pollution Therefore we fabricate the retrofit device for BS IV 125cc engine and we control the pollution much better then before slightly compared as to BSVI engine.
