

## ABSTRACT

Prior to the implementation of our Placement App for College, students endured significant suffering in navigating the job market, grappling with uncertainties about available opportunities, difficulties in tracking application statuses, and the lack of a centralized platform for managing academic and personal information. Our app rectifies these challenges by providing students with a secure, centralized platform where they can register using their college email IDs and effortlessly store and update their academic records. Through a sophisticated matching algorithm, students receive notifications tailored to their qualifications, saving time and effort spent on irrelevant job applications. Moreover, the app enhances organization and reduces stress by offering features such as reminders for application deadlines and notifications for upcoming interviews. By promoting transparency through clear eligibility criteria for job listings, the app empowers students to make informed decisions and increases their chances of securing meaningful employment, ultimately transforming the job search experience and alleviating the suffering previously endured by students. So we designed an app to rectify the student problems. This app provides a login system for both students and admin. The students can login with their college email ID and update their academic records. The app reduces the stress on the students by notifying them of interview dates and opportunities at companies. The deadline is also noticed, and the eligibility criteria are also provided for the students.
