

ABSTRACT

The rental vehicle purpose has experienced significant growth in recent years, and it presents opportunities for owners to generate more revenue by providing vehicles for rent. However, the rental process can be tedious and time-consuming for both owners and customers. To address this challenge, This web application is created, which simplifies the rental process for owners and customers while providing value-added features that enhance the user experience.

The rental vehicle management system is a web application designed for owners and customers. The application allows owners to list their vehicles for rent and manage their rental business. Customers can use the application to search for available vehicles, make bookings, reduce the cost by returning utility feature for both customers and vehicle owners.

The rental vehicle management system features a user-friendly interface, making it easy for users to navigate and complete their tasks. Customers can easily search for available vehicles based on their location, make bookings easily based on their needs, view their rental history and also can track the vehicle. Owners can easily manage their vehicles, track bookings, and view rental history.
